

Microsoft Office PUBLISHER-preferred by most exhibitors

If you do not see an icon , go to your Apps and Settings Under FILE, choose NEW and click on the VERY SMALL underlined SHOW MORE on the far right of the screen. Then select MORE BLANK PAGE SIZES. Select TABLOID LANDSCAPE 11 X 17

Publisher works similarly to WORD in inserting pictures and cropping. The BIG difference being that you can move them around without keeping them in a running line. Having said that, I would recommend inserting your four required pictures ONE AT A TIME.

- Crop each picture using the crop tool and you can resize it by clicking on a corner dot and reducing it diagonally. Move it somewhere on your TABLOID by clicking and holding and moving the picture.
- You will notice that there are faint blue border printing lines around the TABLOID. You can ignore these as we will not be printing this but viewing it on a screen. This will give you a little more space.
- Now insert another picture, doing the same. When they are all inserted, you can adjust them as you wish.
- **SAVE AS** the name of the iris Save as a JPG, or if you are having trouble, just save it as a PUB and we will resave it correctly. That'sAllFolks.JPG or That'sAllFolks.PUB
